

# THE Ultimate

UPDATE ON THE ALWITRA ADVANCED SINGLE-PLY ROOFING SYSTEM

**alwittra**  
THE ULTIMATE ROOFING SYSTEM

## WATERPROOFING BY DESIGN

**ICB (International Construction Bureau) Limited, sole UK distributor of the Alwitra "Ultimate" single ply roofing system is showing architects and specifiers how they can dramatically enhance levels of waterproofing integrity whilst bringing greater roof level creativity, colour and aesthetics to every project.**

The secret lies with the Company's TA Edge Trim, MAG wall capping and Artline fascia systems – exclusively manufactured to complement the Alwitra system and which are now one of the most sought after products in the "Ultimate" range.

Alwitra manufactures the Worlds most advance single ply system and as a result constantly seeks new ways to up-grade and improve its products. The TA edge trim, MAG wall capping and Artline systems means the specifier, main contractor or building owner is given an instant solution to the problems which can occur as a result of differential movement at roof level.

The TA edge trim means there is now an easy way for joints to be protected - when climatic change forces such areas to expand or contract it will not have any effect on the waterproofing membrane. Weak-spots are eliminated, potential risk areas no longer exist and the roof is completely secure.

The TA edge trim is designed not to be attached to the membrane. It is a unique design concept, which is now widely recognised as the only way to achieve the long-term promise of true waterproofing at the roofline.

Such is the success of the range that has now been launched independently from the Alwitra system – it's yet another fine achievement for the Company that has pioneered high-tec, hi-spec single ply waterproofing in the UK for nearly twenty years. If you are looking for World-class performance, choice and a dedicated range of products – look no further. It has to be Alwitra.

## ROOFING INSPIRATION

Improving levels of performance waterproofing is only half of the story... ICB's TA edge trims, MAG wall cappings and Artline fascias are now being specified to bring the UK's roofs to life.

It means the roofline can now be a dramatic, aesthetic feature of any project. You choose the shape, you select the RAL colour, simply give us the information and every single component will be engineered to fit exactly. Manufactured from quality aluminium, a choice of three finishes are available – painted, mill finished or anodised giving the specifier or building owner the ability to enhance and customise the roof to their precise requirements. Inspiration and innovation blended perfectly. Call us now to find out more.

## HELP TO CHOOSE

**A new technical brochure is now available featuring our range of exceptional TA edge trims, MAG wall capping and Artline fascias.** Designed specially to assist the architect, main contractor or building owner with choosing a trim or fascia system to complement any industrial, commercial or residential single ply roof, the literature clearly shows the design options available together with technical and performance characteristics. Call us now or use the reader response on this issue to obtain your free copy immediately.

# HIDE IT!

The range of TA edge trims and Artline fascias each incorporate a dedicated "secret" fix system. It means the fascia or edge trim itself is not pierced in any way, therefore corrosion, weak spots or damage to the facing surface is eliminated.

The bracket fixing system sits behind the facing surface and incorporates a rubber seal to prevent water seepage. The bracket can be adjusted on site, raised or lowered to exactly the right position allowing precise control over its location and for the visual effect to be perfected.

MAG wall cappings are simply clipped into place and do not require fixings. They then act as a permanent protector for the edge of the membrane and the wall's surface, improving waterproofing integrity and the overall look of the roof.

# QUALITY YOU CAN'T BEAT

Manufactured from high performance raw materials, specially chosen for their longevity and absolute resistance to corrosion in the harshest climatic environments, our range of trims, cappings and fascias are created to offer the ultimate in maintenance free systems.

No timber to paint, rot, warp or twist. TA edge trims; MAG wall cappings and Artline fascias are superbly sustainable and recyclable. It all part of our promise to ensure every single component in the "Ultimate" single ply roof is engineered to last and last.

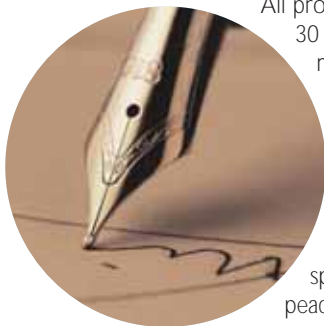

## DESIGNED TO PERFORM, GUARANTEED TO LAST

ICB's TA edge trims, MAG wall cappings and Artline fascias form a key part of the Ultimate single ply system. It's a package so comprehensive that it includes absolutely every component for the most advance roof specification available.

A choice of membranes, including high performance "green", photovoltaic-power generating, and self-adhesive options sit at the heart of the system.

All proven to deliver long-term performance – in 30 years the company has not had a single material failure.

The company protects and offers every single one of its installations a comprehensive latent defects insurance guarantee. The package, one of the most respected of its kind in the roofing business, gives architects, main contractors, specifiers and building owners absolute peace-of-mind for up to 20 years.

# Artistic ARTLINE

If you are looking for truly unique, truly unusual, and truly dramatic – look at Artline.

Artline is the ultimate in roofline edge trims, increasingly sought after by architects and building owners who want to place their stamp of originality and creativity on the building.

As with TA and MAG, Artline, which is available in a wide range of standard profiles, is custom manufactured to the required size delivering a superb three-dimensional effect to the roofline.

The system comes complete with a dedicated and precision engineered range of spacing and fixing brackets to ensure that once installed it will continue to look good and perform faultlessly for decades.
